Who cares? Why do they care?

- **Public Health Officials:** Understanding the factors affecting death rates is crucial for public health officials to develop effective policies and interventions to improve health outcomes.
- **Economists:** Variations in death rates can impact economic productivity and healthcare expenditures. Economists are interested in the economic implications of these variations.
- **Researchers and Academics:** This project can provide valuable insights for researchers studying global health disparities and epidemiology.
- **General Public:** People are naturally concerned about health outcomes and mortality rates, and this information can be relevant to individuals planning their lives and making health-related decisions.
